Ongoing work

Car purchases, indebtedness, and monetary policy

Through a full-population panel for Sweden 1995–2015, I study how monetary policy affects new and used car purchases.

The Housing Wealth Effect: Quasi-Experimental Evidence, with Dany Kessel, Björn Tyrefors, and Roine Vestman (Latest version can be found [here](#))

Our paper estimates the house price effect on car consumption by using an unexpected announcement of the continuation of Bromma Airport outside Stockholm. Affected households lost 19% house wealth relative to households outside the airport noise zone, and we find a reduction in the price of new cars affected households buy in the following years. The extensive margin is not affected. We disentangle the channels at work by empirically studying borrowing behavior and through the lens of a calibrated life-cycle model which replicates most of our findings.

What do 12 billion card transactions say about house prices and consumption, with Knut Are Aastveit, Magnus Gulbrandsen, Ragnar Juelsrud, and Kasper Roszbach

Using a large sample of card transactions, we study how public sector employees and retirees responded to falls in home prices in Stavanger, Norway, compared to similar households in other parts of Norway following the oil price plunge of 2014–2016. We find overall small effects on consumption, which are concentrated on durable expenditures on furniture and car purchases. The effects are also greater for more indebted households.

Heterogeneous Effects of QE on Corporate Bonds and Firm Outcomes, with Adam Baybutt

Since the Financial Crisis, quantitative easing has become a standard monetary policy tool. We ask how the Federal Reserve's QE programs during the 2010–2020s heterogeneously affected public firms' borrowing costs in the corporate bond market and if it influenced real outcomes. Results are so far ambiguous and indicate very small effects where dividends stand out to be most positively affected. We

are currently exploring Covid-19-related QE.
